(54) Title: CLOTHES HANGING DEVICE FOR TRANSPORTING CLOTHES IN A PASSENGER VEHICLE

(57) Abstract: The subject of this invention is a clothes hanging device used particularly for the comfortable transportation of articles of clothing within the interior of a passenger vehicle behind the back and head rests of the front seat. The invention is characterised by the conditions that the clothes hanger body (1) is attached in fixed fashion to a clothes hanger supporting rod (2), and the lower end of the clothes hanger supporting rod (2) is inserted into a matching fitting (4). Also characteristic of the invention are the conditions that the matching fitting (4) is attached directly to the upper portion of the back of the front seat, or in fixed fashion to a telescopic connecting piece (3) disposed between the two rods that support the head rest; that the matching fitting (4) is preferably a pipe-like body of rectangular cross-section, into which the clothes hanger supporting rod (2), also of rectangular cross-section, is

inserted; and that a hook (5) serving to accommodate the placement of further conventional clothes is mounted to the upper end of the clothes hanger supporting rod (2) that projects beyond the clothes hanger body (1).
